A scatter plot showing 1000 data points (blue dots) distributed across a light gray background. A horizontal red dashed line is drawn at y=0.5. The data points are mostly clustered below this line, with a few outliers above it, including one point near the top center.

Manhattan plot showing $-\log_{10}(\text{p-value})$ for various genes. The y-axis ranges from 0 to 5. A red dashed line indicates a significance threshold at approximately 1.3. Several genes are highlighted with blue dots, with the highest peak at approximately 3.3 for a gene on chromosome 1.
